

Agenda.

- How Payment flow works.
- Callback
- Webhook
- Reconciliation.

#

① Security & Privacy.

② Huge variety of Payment methods.

- ↳ Multiple banks
- ↳ Debit Cards.
- ↳ Credit Cards
- ↳ Wallets.

③ A lot of regulatory checks.

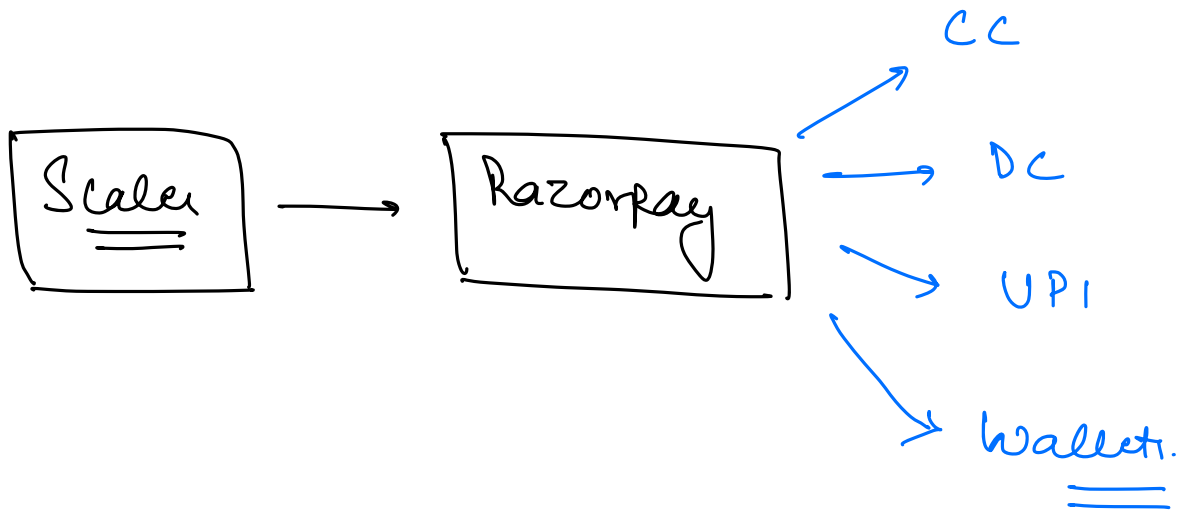

Build

vs

Buy

⇒ Payment Gateway

↳ A third party service provider for all the payment related tasks.

Top PG's in India

→ Razorpay
→ Pay U Money
→ PhonePe
→ Paytm
→ CCAvenue

→ Stripe
→ Paypal

Amazon.

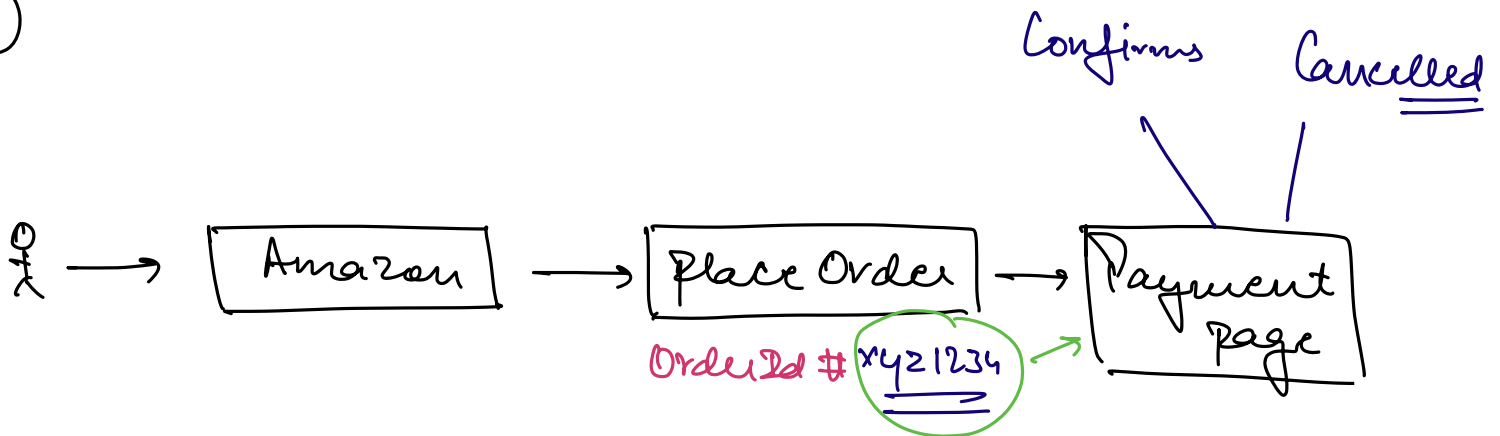

① Order → Payment ✓

② Payment → Order

Amazon first creates an Order in the Pending State and then redirects us to the Payment page, and if we complete the payment, Amazon marks the order as Confirmed else Amazon marks the order as Cancelled after some time.

Why Amazon creates an Order first.

①

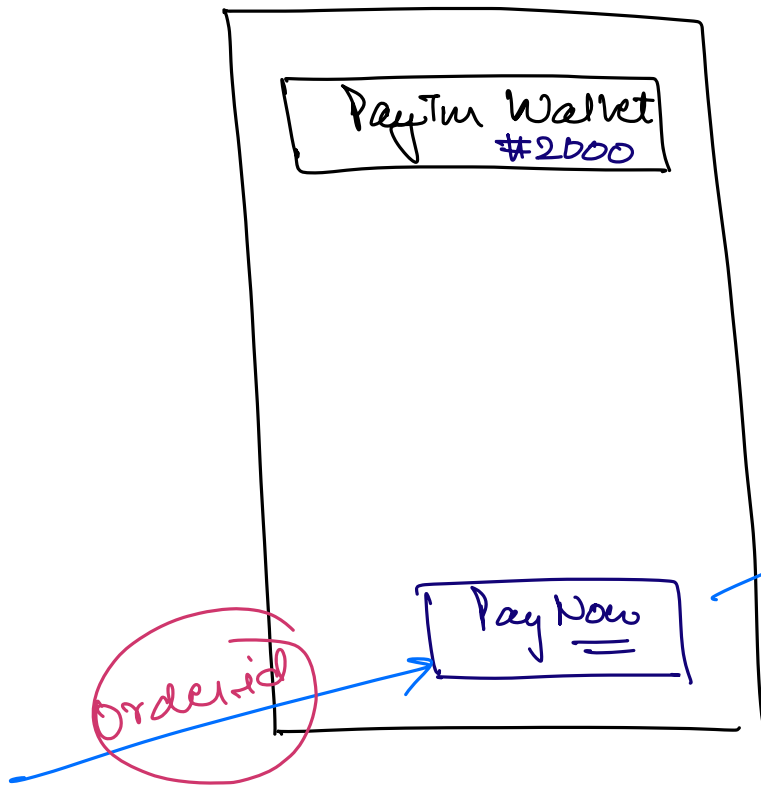

→ Amount debited

→ Payment didn't get Confirmed.

⇒ If order is created after the payment is done, then how Amazon will get to know about any extra payment received and from whom?

②

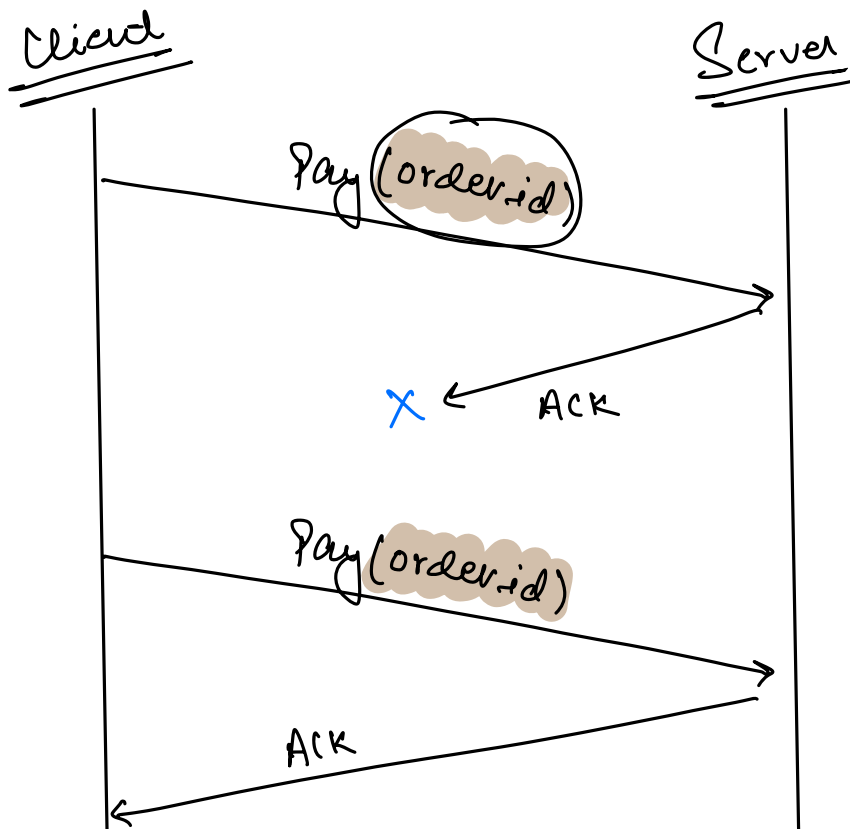

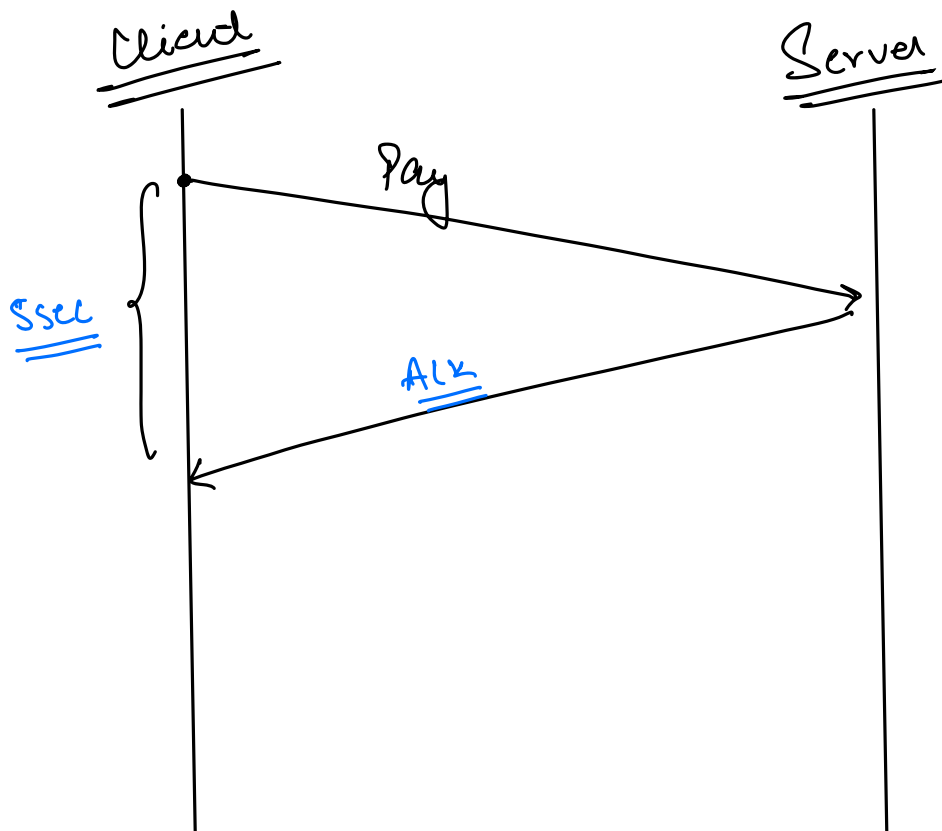

If we end up clicking on this button twice then money might be debited from our wallet twice

Idempotency

⇒ Order id : Idempotency key

Attribute that allows to uniquely identify a request and handle duplicates.

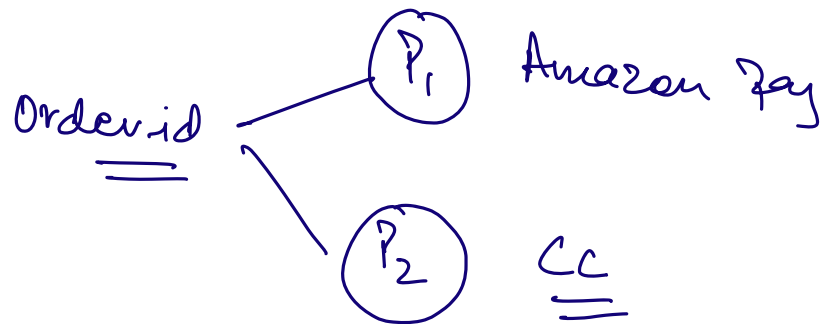

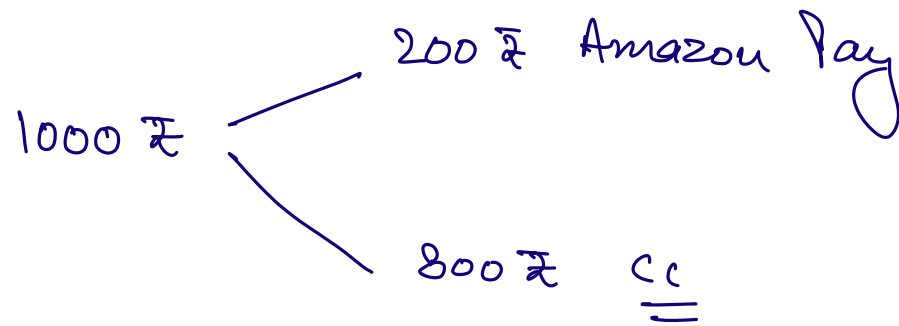

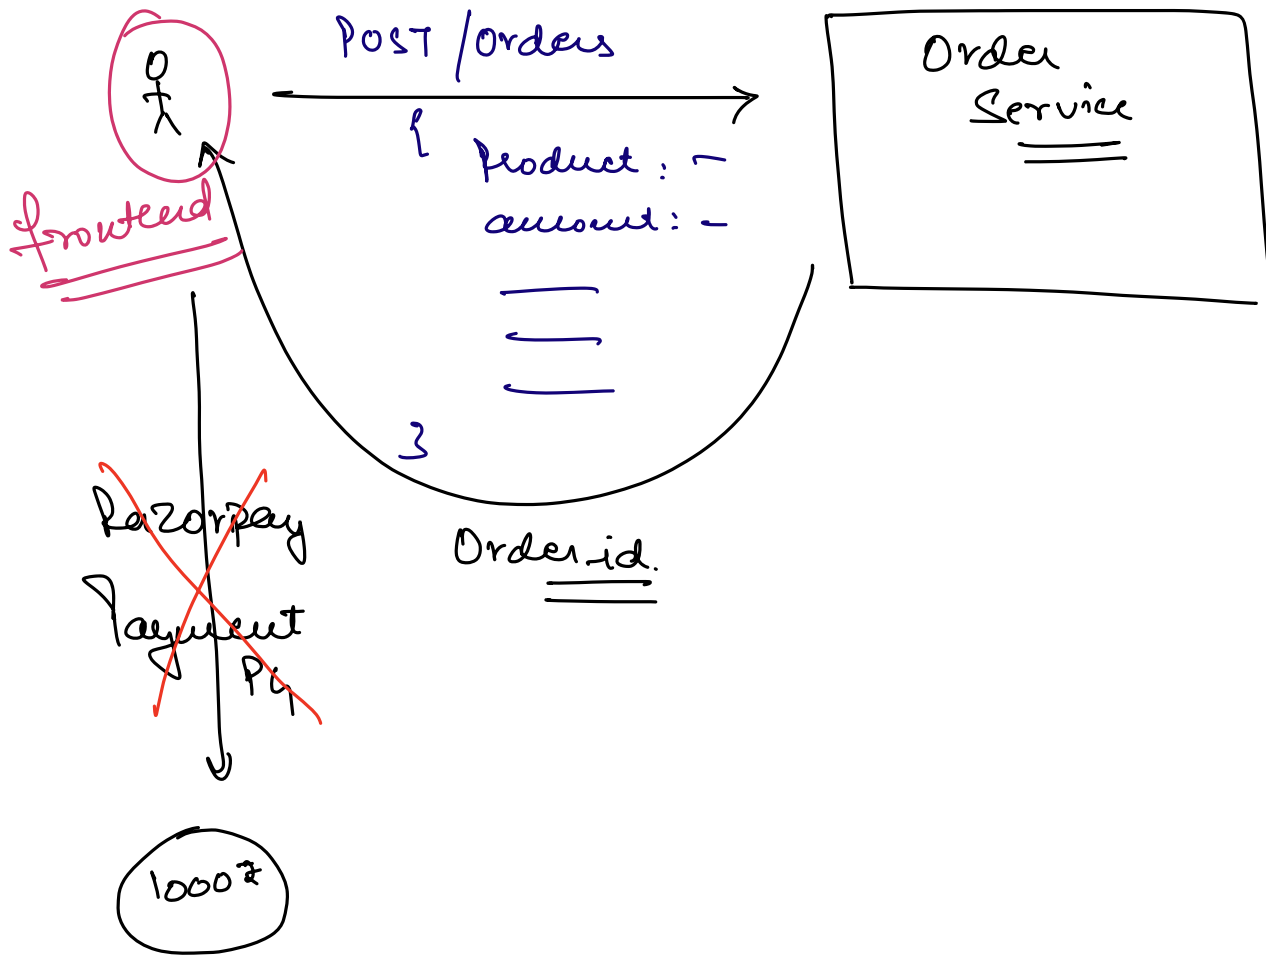

Order id	Status
1234	✓

① ②

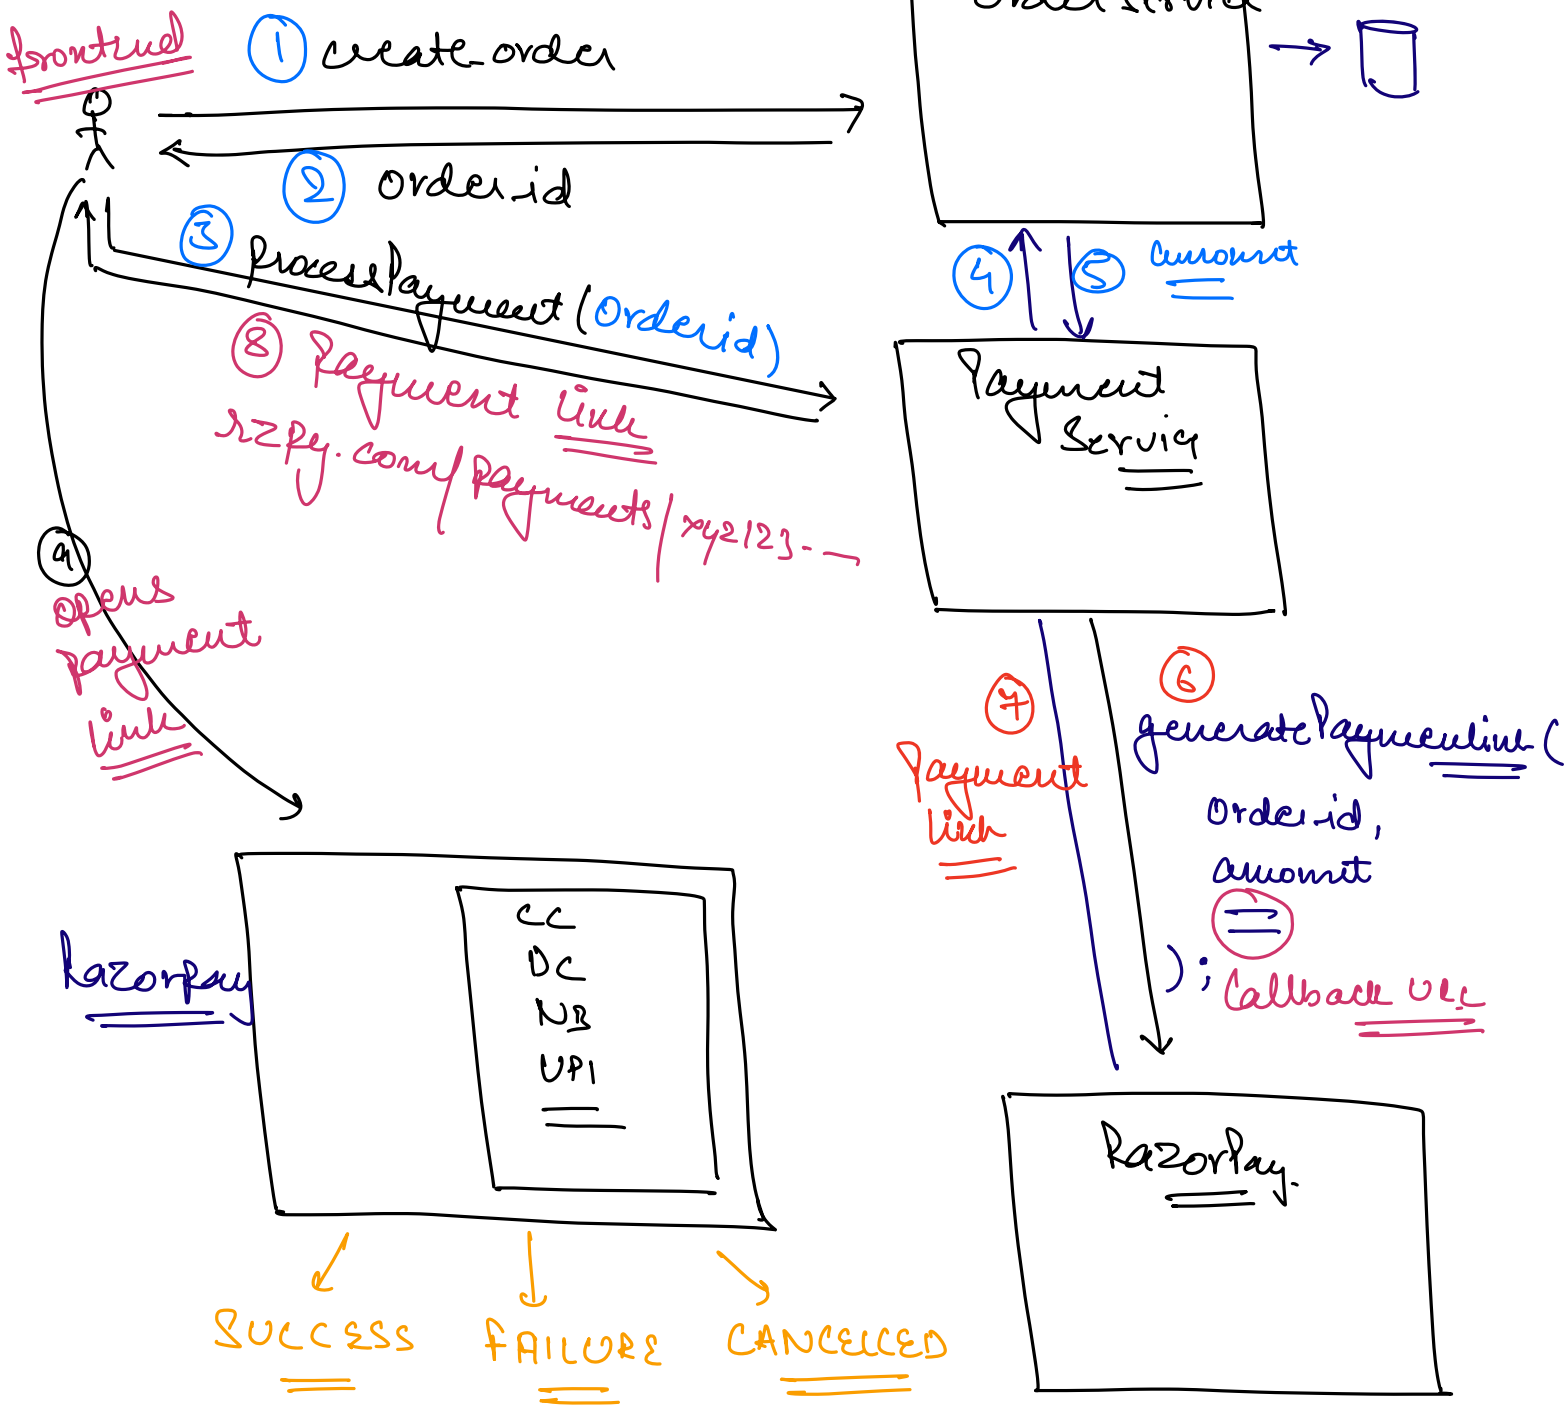

Reconciliation.

③ Partial Payments

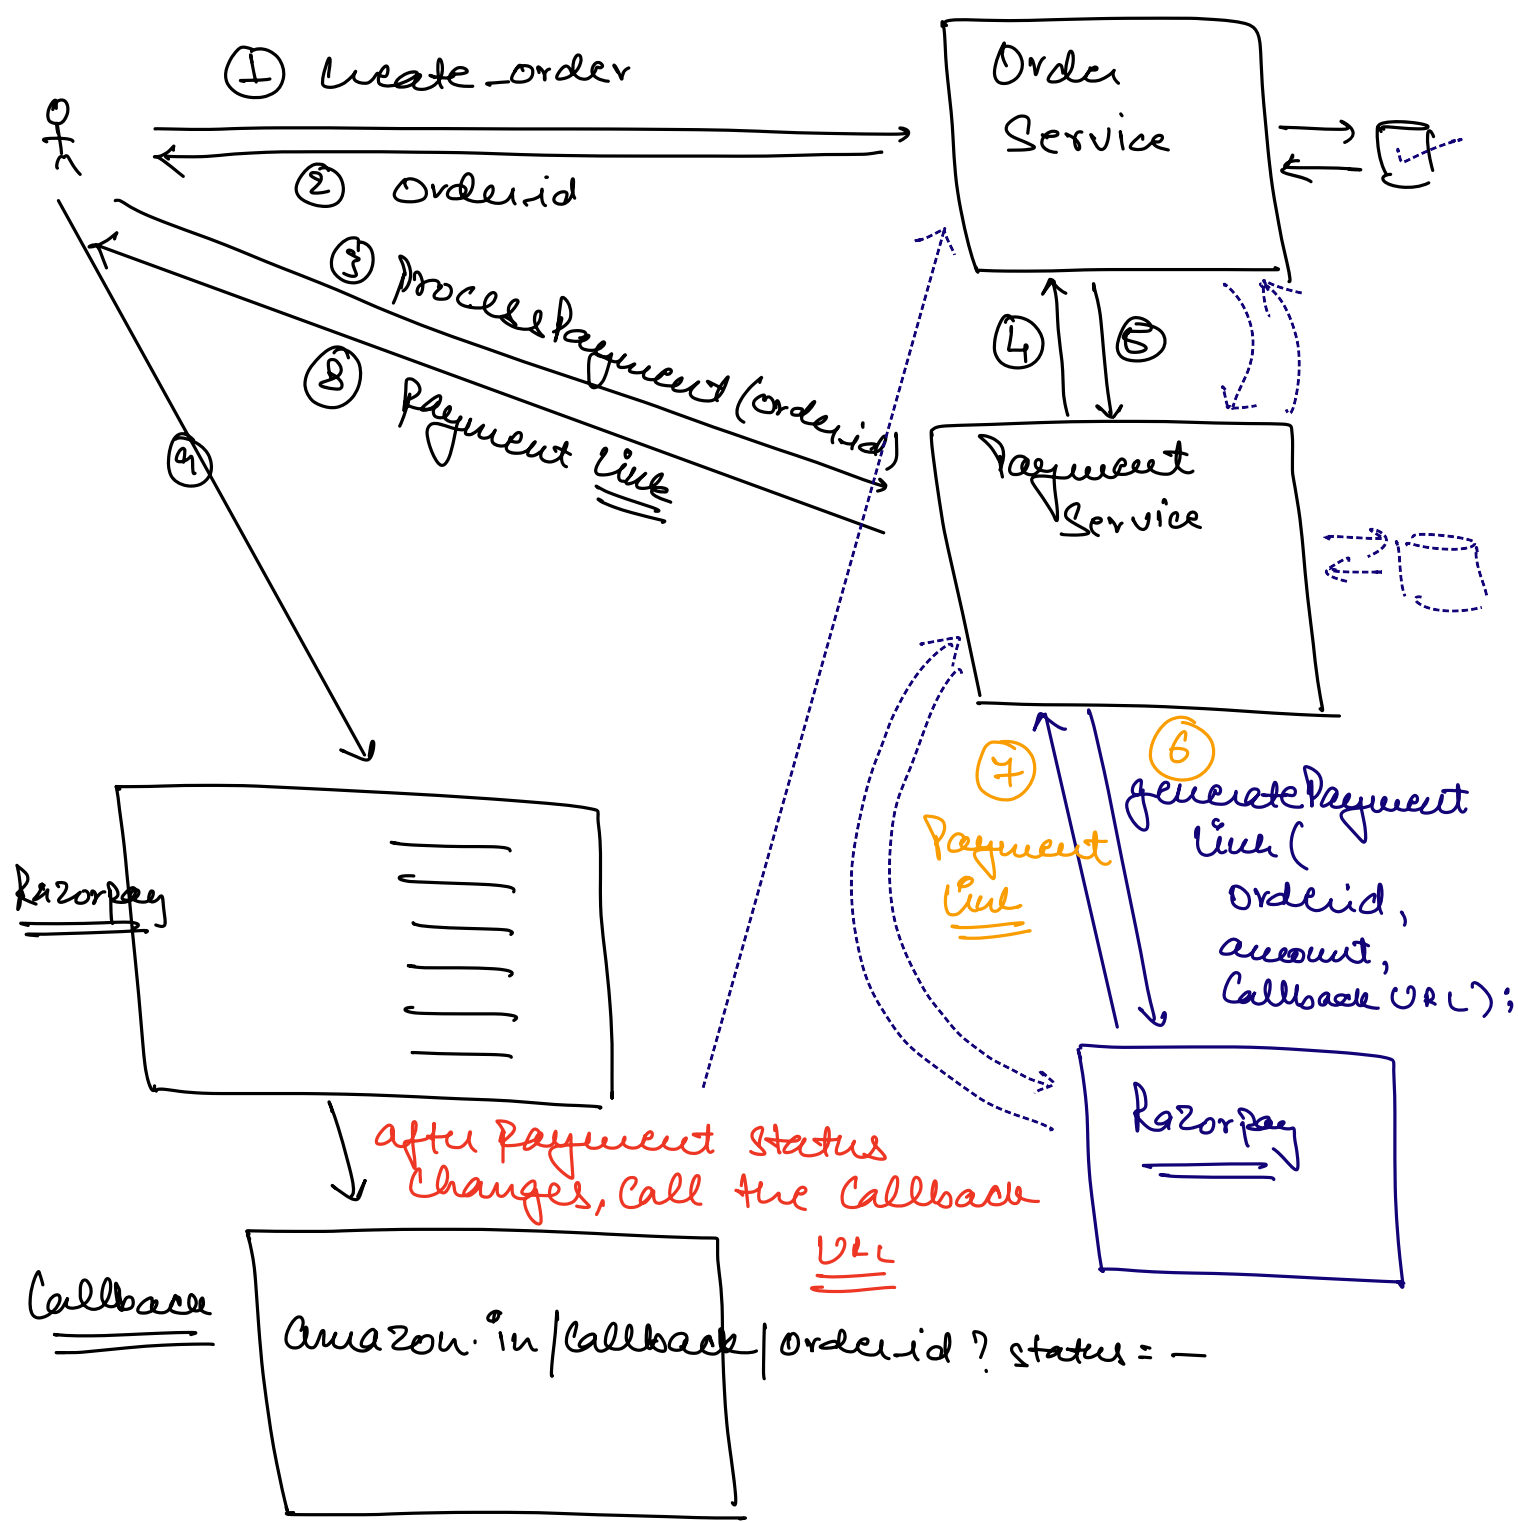

⇒ Payment Service

① CALLBACK URL

When the status of Payment changes, please redirect to this page.

⇒ Once the Payment changes, we get redirected to the Callback URL.

⇒ When Payment gets Succeeded, Amazon might need to do multiple things

→ Change the Order Status.

→ Invoice generation

—
—
—

⇒ To do all the above tasks, Server need to know the Payment Status.

On the Payment Link:

→ Don't press the back button

→ Don't refresh

→ N/w failure.

Webhook.

⇒ API of Amazon server that is called by the Pg when any event gets triggered on the Payment.

Razorpay Dashboard

↳ Set Webhook URL.

Success
failure
refunded

→
→

→ api

amazon.in/orders/webhook(-.-

Can Webhook also fail? ⇒ YES.

If OrderService is down.

⇒ In the worst case scenario, both callback & webhook might fail

Reconciliation

⇒ Cruc Jobs.

⇒ After every x hours (6 hrs, 12 hrs, 24 hrs)
Payment GW sends a file to the Server
of all the payments that have happened
in last x hours.

Order id	Payment id	Status
1234	X42	Success

OrderService will match the data for all
the Order id's that it has received from PG
