EXECUTIVE SUMMARY

- Results-driven **Java Backend Developer** with **around 3 years** of experience in designing, developing, and maintaining scalable backend applications using **Java, Spring Boot, and Hibernate**
- Skilled in microservices architecture, RESTful API development, and database management (PostgreSQL, MySQL, MongoDB)
- Adept at implementing cloud-based solutions in AWS, Azure, or Google Cloud environments, leveraging containerization tools like Docker and Kubernetes
- Proficient in optimizing backend performance, ensuring high availability and responsiveness, and applying security best practices, including JWT and OAuth
- Skilled in setting up and managing CI/CD pipelines for seamless deployment workflows
- Gained project experience in Core Java, Spring Boot, SQL and Design patterns with hands on experience in Git, Maven, Docker, Jenkins, and AWA Cloud
- Hands-on experience with DevOps tools like Git, Maven, Docker, Jenkins, and AWS, along with a basic understanding of frontend technologies such as React.js and Angular
- Strong collaborative skills, working with cross-functional teams to deliver high-quality solutions

CAREER CONTOUR

Since Jan 2024 with Dedalus, Chennai as Java Developer (Backend Java Applications)

- Designed and developed Java-based web applications, including the Athena product, and improved hospital management operations by 30%
- Enhanced system reliability, and performance by upgrading, and maintaining Java Spring Boot legacy systems integrated with Swing GUI and Oracle DB
- Created detailed technical documentation and conducted code walkthroughs via Confluence, streamlined knowledge transfer and onboarding processes
- Reduced downtime by 25%, and raised user satisfaction by resolving production bugs, and implemented code enhancements
- Established and optimized CI/CD pipelines using Jenkins, improved integration, testing, and deployment efficiency
- Collaborated in Agile sprint planning via Jira, managed tasks from requirement gathering to successful deployment

Aug 2022 - Nov 2023 with Capgemini, Bangalore

Aug 2022 - Nov 2023 as Software Development Engineer (Full Stack)
Mar 2022 - May 2022 as Intern - Full stack Java developer

As Software Development Engineer (Full Stack)

- Engineered a pre-calculation tool using Java Full Stack, streamlined banking operations, and enhanced monthly interest rate simulations by 80%
- Implemented PostgreSQL and Spring Boot within a microservices architecture, improved system performance by 40% and increasing concurrent user capacity by 200%
- Designed, and integrated JWT security and RESTful APIs, boosting application security, and reliability by 25% through rigorous JUnit testing

Java Backend Software Development

CORE COMPETENCIES

Backend Development
Database Management
Cloud Computing
Performance Optimization
Security Implementation
CI/ CD Pipeline Management
Automated Testing
Agile Methodology
Troubleshooting & Debugging

KEY RESULT AREAS

Technical:

Programming Languages: Java, SQL, Python, JavaScript, Linux

Libraries and Frameworks: Spring Boot, REST API, SpringJPA, Hibernate, ReactJS

Tools: PostgreSQL, PostMan, Github, Jenkins, AWS, Docker

Other Skills: DSA, LowLevelDesign, OOPs, Microservices, API Integration, Core Java

Functional:

- Application Development:** Designing, developing, testing, and deploying robust backend applications using Java, Spring Boot, and related technologies. Ensuring high-quality, scalable, and maintainable code aligned with industry best practices.
- Microservices Architecture:** Building, and maintaining microservices-based systems with a focus on modularity, scalability, and reusability. Strong understanding of microservices design patterns and architecture principles.
- API Development:** Designing, implementing, and maintaining RESTful APIs to enable seamless integration with frontend applications and third-party systems.
- Database Management:** Developing, optimizing, and managing relational databases (e.g., PostgreSQL, MySQL) and NoSQL databases (e.g., MongoDB). Implementing advanced queries, and ensuring efficient database performance.
- Performance Tuning and Troubleshooting:** Conducting performance optimization to ensure

- Conducted API testing with Postman and Swagger, optimized performance, and reduced query response times by 50% using advanced JPQL techniques
- Developed a React.js front-end dashboard, containerized with Docker, and deployed in AWS EKS via CI/CD pipelines in Jenkins, achieving 99.9% uptime

As Intern - Full stack Java Developer

- Gained proficiency in Core Java, Hibernate, JPA, Spring Boot, HTML, CSS, JavaScript, React JS, REST APIs, PostgreSQL, SQL, and Linux commands
- Utilized tools such as GitHub, Postman, and Maven to enhance development processes and streamline project workflows

PROJECT UNDERTAKEN

Project: SmartCovidClinic

Github Link:

<https://github.com/ashok122006090/SmartCovidClinic/tree/branch5>

- Developed and implemented a COVID clinic appointment system using Spring Boot (Java backend), PostgreSQL, and React JS, achieving a 50% improvement in code quality through SonarQube integration
- Ensured system reliability, and functionality by performing extensive testing with JUnit and Postman for validation and API performance
- Created detailed class, and use case diagrams, leveraged Hibernate to optimize database design and establish efficient entity relationships

ACADEMIC CREDENTIALS

M.Sc. (Computer Science); Pursuing

Wolf University, in collaboration with Scaler Neovarsity, focusing on advanced topics in software development, data structures, algorithms, and scalable system design

B.Tech. (Electronics and Instrumentation); 2022

SASTRA University with 7.4 CGPA

high availability, reliability, and responsiveness. Troubleshooting, and resolving technical issues to minimize system downtime.

- **Cloud Integration:** Deploying, and managing backend services in cloud environments such as AWS, Azure, or Google Cloud. Using Docker for containerization and Kubernetes for orchestration.
- **CI/CD Pipelines:** Setting up, and maintaining CI/CD pipelines with tools like Jenkins or GitHub Actions to automate testing and deployment workflows.
- **Testing and Debugging:** Implementing unit testing (e.g., JUnit), and participating in integration testing to ensure application robustness. Performing debugging and validation to ensure error-free performance.
